

Care instructions – High Tech & Libelle

Ensuring a long product life

Bases

Powder-coated bases undergo multi-stage surface treatments, so maintenance is only needed if the paint is worn or damaged. Clean regularly with a sponge or a cloth and soapy water. Do not use solvents or cleaning agents containing abrasives. Maintenance entails sanding and painting with a metal paint for outdoor use.

Hot-galvanized bases offer long-term corrosion protection and need no maintenance other than regular cleaning. Hot-galvanizing produces a rough and mottled finish that can change in colour depending on the properties of the material. Such variations will, however, even out over time. Any minor damage to hot-galvanized products will generally heal itself.

Tabletops High Tech – laminate for outdoor use

Tabletops need only be cleaned as necessary. After some time, the tabletop's bevelled edges may start to grey. To maintain their lustre and colour, the edges can be oiled with normal cooking oil. Be sure to wipe up any excess oil.
